

HAYWARD CITY COUNCIL

RESOLUTION NO. 16-

Introduced by Councilmember _____

RESOLUTION ADOPTING AN INITIAL STUDY, MITIGATED
NEGATIVE DECLARATION AND MITIGATION
MONITORING AND REPORTING PROGRAM AND
APPROVING VESTING TENTATIVE TRACT MAP AND
ZONE CHANGE APPLICATION 201600059 PERTAINING TO
THE SUBDIVISION AND CONSTRUCTION OF TWENTY
DETACHED SINGLE-FAMILY HOMES AT 25906 GADING
ROAD

WHEREAS, on January 5, 2016, Tony Dutra, Gading Ventures, LLC (Applicant) submitted Zone Change and Vesting Tentative Tract Map Application 201600059 for the property located at 25906 Gading Road, which applications requested a zoning reclassification from Single Family Residential to Planned Development District and a property subdivision to facilitate construction twenty (20) detached single-family homes (the “Project”); and

WHEREAS, a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program has been prepared to assess and mitigate the potential environmental impacts of the Project; and

WHEREAS, the Planning Commission considered the Project at a public hearing held on June 23, 2016, and recommended that the City Council adopt the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program; approve Zone Change and Vesting Tentative Tract Map Application 201600059, subdividing and reclassifying the property from Single Family Residential to Planned Development District; and

WHEREAS, notice of the hearing was published in the manner required by law and the hearing was duly held by the City Council on July 5, 2016.

NOW, THEREFORE, BE IT RESOLVED that the City Council hereby finds and determines as follows:

CALIFORNIA ENVIRONMENTAL QUALITY ACT

1. Pursuant to CEQA Guidelines Section 15220, an Initial Study (“IS”) was prepared for this project with the finding that the Mitigated Negative Declaration (“MND”) was appropriate because all potentially significant impacts could be reduced to a level of insignificance.

2. That the proposed MND was prepared by the City of Hayward as Lead Agency and was circulated with a twenty (20) day public review period, beginning on May 27, 2016 and ending on June 17, 2016.
3. That the proposed MND was independently reviewed, considered and analyzed by the City Council and reflects the independent judgement of the City Council; that such independent judgement is based on substantial evidence in the record (even though there may be differences between or among the different sources of information and opinions offered in the documents, testimony, public comments and such responses that make up the proposed MND and the administrative record as a whole): that the City Council adopts the proposed MND and its findings and conclusions as its source of environmental information; and that the proposed MND is legally adequate and was completed in compliance with CEQA.
4. That the proposed MND identified all potential significant adverse impacts and feasible mitigation measures that would reduce these impacts to less-than-significant levels, and that all of the applicable mitigation measures identified in the MND and Mitigation Monitoring and Reporting Program will be adopted and implemented. Based on the MND and the whole record before the City Council, there is no substantial evidence that the project will have a significant effect on the environment.
5. That the project complies with CEQA, and that the proposed Mitigated Negative Declaration was presented to the City Council, which reviewed and considered the information contained therein prior to approving the project. The custodian of the record of proceedings upon which this decision is based in the Development Services Department of the City of Hayward located at 777 B Street, Hayward, CA 94541.

ZONE CHANGE

6. **The development is in substantial harmony with the surrounding area and conforms to the General Plan and applicable City policies.**

The proposed development is an infill site located within an existing single- and multi-family neighborhood. The small lot single-family development respects the lotting pattern of the surrounding neighborhood by fronting lots onto the proposed private street with an attractive landscaped frontage along the public street. The twenty units proposed results in a net density of fifteen dwelling units per acre, consistent with the density range of 8.7 to 17.4 dwelling units per acre per the General Plan land use designation of Medium Density Residential. Additionally, the project is consistent with the [Harder-Tennyson Neighborhood Plan <http://www.hayward-ca.gov/sites/default/files/documents/Harder-TennysonPoliciesStrategies.pdf>](http://www.hayward-ca.gov/sites/default/files/documents/Harder-TennysonPoliciesStrategies.pdf) in that it will provide additional detached single-family homes on an in-fill site within the neighborhood.

In addition, the proposed development is consistent with General Plan goals and policies related to residential design, and sustainability, infill and inclusionary housing as follows:

LU-3.6 Residential Design Strategies: *The City shall encourage residential developments to incorporate design features that encourage walking within neighborhoods by:*

- *Creating a highly connected block and street network.*
- *Designing new streets with wide sidewalks, planting strips, street trees, and pedestrian-scaled lighting.*
- *Orienting homes, townhomes, and apartment and condominium buildings toward streets or public spaces.*
- *Enhancing the front facade of homes, townhomes, and apartment and condominium buildings with porches, stoops, balconies, and/or front patios.*
- *Ensuring that windows are provided on facades that front streets or public spaces.*

LU-3.7 Infill Development in Neighborhoods: *The City shall protect the pattern and character of existing neighborhoods by requiring new infill developments to have complimentary building forms and site features.*

H-2.3 Inclusionary Housing: *The City shall enforce the Inclusionary Housing Ordinance to ensure that a certain percentage of new residential units will be made affordable to lower- and moderate-income households.*

H-3.1 Diversity of Housing Types: *The City shall implement land use policies that allow for a range of residential densities and housing types, prices, ownership, and size, including low density single-family uses, moderate-density townhomes, and higher-density apartments, condominiums, transit-oriented developments, live-work units, and units in mixed-use developments*

H-3.3 Sustainable Housing Development: *The City shall improve affordability by promoting sustainable housing practices that incorporate a ‘whole system’ approach to siting, designing, and constructing housing that is integrated into the building site, consumes less water and improves water quality, reduces the use of energy use, and other resources, and minimizes its impact on the surrounding environment.*

H-3.6 Flexible Standards and Regulations: *The City shall allow flexibility within the City’s standards and regulations to encourage a variety of housing types.*

H-3.10 No Net Loss Zoning: *Consistent with Government Code Section 65863, the City shall consider the impacts of rezoning and general plan amendments of residential sites on the City’s ability to meet its share of the regional housing need.*

The Project is located on an infill site immediately adjacent to existing single- and multi-family residential development. The proposed development utilizes similar architectural elements as the surrounding community. Utilizing similar architectural elements and private roadways for this infill development ensures the entire area maintains a harmonious, cohesive appearance. In addition, the site design is consistent

with the surrounding area with homes fronting onto private streets. Finally, the project provides sustainable features, such as photovoltaic panels and tankless water heaters, and infrastructure for future electric vehicle charging stations in each home.

7. **Streets and utilities, existing or proposed, are adequate to serve the development.**

The project site an infill site that was previously developed with a single-family home. The site is located in an urbanized area and has access to utilities with adequate capacity to serve the proposed twenty-unit subdivision.

8. **The development creates a residential environment of sustained desirability and stability, that sites proposed for public facilities, such as playgrounds and parks, are adequate to serve the anticipated population and are acceptable to the public authorities having jurisdiction thereon, and the development will have no substantial adverse effect upon surrounding development.**

The project applicant has proposed a development that integrates density, livability and renewable energy sources (solar energy systems). The project provides a well-balanced neighborhood of small lot, detached single-family homes that include usable private outdoor yards, along with group open space. With the exception of the lot sizes and setbacks, the proposed units are two-story in design, consistent with the existing homes in the neighborhood. The proposed development will replace a vacant in-fill property within a residential neighborhood with residential uses that will serve to complete the neighborhood and introduce new and attractive housing opportunities to existing and new residents of the City. The proposed project will serve to enhance the existing surrounding neighborhood by introducing attractive single-family homes on a vacant site surrounded by primarily post WWII single- and multi-family developments. The project is conditioned on providing pedestrian scale lighting within and adjacent to the development along Gading Road.

9. **In the case of a development in increments, each increment provides a sufficient proportion of total planned common open space, facilities, and services so that it may be self-contained in the event of default or failure to complete the total development according to schedule.**

The proposed project will be developed in one phase ensuring that the infrastructure, services and facilities will be available to all future residents in the development in a timely fashion

10. **Any latitude or exception(s) to development regulations or policies is adequately offset or compensated for by providing functional facilities or amenities not otherwise required or exceeding other required development standards.**

The project is consistent with the General Plan and Harder-Tennyson Neighborhood Plan in that it will create single-family homes consistent with the density in the Medium Density Residential General Plan designation. The applicant is seeking a

Planned Development zoning designation to provide flexibility in the site layout of the units, and to deviate from certain development standards, such as lot sizes and widths, setbacks, and lot coverage. To offset these deviations from development standards, the following project amenities are proposed to support the Planned Development zoning and shall be required and shown/indicated on the Precise Plan:

- Install photovoltaic solar systems on all units;
- Covered front porches on all of the homes to enhance and strengthen the streetscape;
- A small private park area with benches and bike racks for residents to utilize as a place to gather and interact. This common open space amenity is not required of single-family detached homes, but is being provided to offset the reduced setback and yard areas;
- Six of the proposed units include a bedroom and full bathroom on the ground floor to support multi-generational living.

The proposed development includes enhanced architectural design, including the integration of covered front porches on all of the units to strengthen the streetscape. Each unit is proposed to include a tankless water heater, installation of photovoltaic panels on the roof, and electric vehicle charging infrastructure ready for future residents, all to create a more environmentally sensitive development and more sustainable housing units for future residents. The project includes group open space for residents of the development to utilize and interact as a community. The required HOA will maintain the private infrastructure including the private street, park, and the bio-retention areas.

TENTATIVE PARCEL MAP

11. **That the proposed map is consistent with applicable general and specific plans as specified in Section 64541 of the Subdivision Map Act. [Subdivision Map Act §66474(a)]**

The proposed subdivision map is consistent with the allowable uses and the General Plan density designation of Medium Density Residential. The proposed net density of 15 dwelling units per acre (du/ac) is within the allowable density of 8.7 to 17.4 du/ac.

12. **That the design or improvement of the proposed subdivision is consistent with applicable general plan and specific plans. [Subdivision Map Act §66474(b)]**

The proposed subdivision, as demonstrated by the findings associated with the Planned Development Rezone application, is consistent with the General Plan goals and policies related to infill development, residential design, encouraging a variety of housing types, sustainable development, and affordable housing (LU 3.6; LU 3.7; H 2.3; H 3.3; H 3.6).

13. **That the site is physically suitable for the type of development. Subdivision Map Act §66474(c)]**

The preliminary geotechnical investigation and geotechnical exploration report performed by ENGO (dated February 19, 2015) demonstrates that the proposed residential development is feasible and the proposed subdivision would occur on a site suitable for the proposed development with the recommendation that a design level geotechnical investigation be conducted prior to construction to review the geotechnical aspects of the project. The site provides sufficient lane widths and ingress/egress points, pedestrian facilities and infrastructure locations, such as water and sewer lines, storm drains and stormwater treatment areas, to support the number of units being proposed.

14. **That the site is physically suitable for the proposed density of development. [Subdivision Map Act §66474(d)]**

The subject site, as designed, supports the proposed 20-unit residential subdivision with all the design elements and infrastructure of a typical subdivision.

15. **That the design of this infill project and the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. [Subdivision Map Act §66474(e)]**

The approval of the Vesting Tentative Tract Map 8319, as conditioned, will have no significant impact on the environment, cumulative or otherwise. An Initial Study, Mitigated Negative Declaration, and supporting environmental reports demonstrates that potential impacts in the area of biological resources, hazards and hazardous materials, geology and soils, and noise will be less than significant with the inclusion of the recommended mitigations.

16. **That the design of the subdivision or type of improvements are not likely to cause serious public health problems. [Subdivision Map Act §66474(f)]**

Adequate capacity exists with the existing utilities, including sanitary sewer, to provide services to the proposed project site thus eliminating the possibility that the development would cause serious public health problems. Any potential risk to public health has been analyzed in the Initial Study and appropriate mitigation measures have been identified in the areas of air-quality, biological resources, geology and soils, cultural resources and noise.

17. **That the design of the subdivision or type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision. [Subdivision Map Act §66474(g)]**

The proposed project does not conflict with any existing public easements. Upon completion of the development, new public easements will be required as necessary.

NOW THEREFORE, BE IT RESOLVED that the City Council of the City of Hayward, based on the foregoing findings, hereby adopts the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program (Exhibit "B") and approves Zone Change and Vesting Tentative Tract Map Application 201600059, subject to the adoption of the companion ordinance (Ordinance No. 16-XXX) rezoning the property located at 25906 Gading Road from Single Family Residential to Planned Development District, subject to the attached conditions of approval (Exhibit "A").

IN COUNCIL, HAYWARD, CALIFORNIA _____, 2016

ADOPTED BY THE FOLLOWING VOTE:

AYES: COUNCIL MEMBERS:

NOES: COUNCIL MEMBERS:

ABSTAIN: COUNCIL MEMBERS:

ABSENT: COUNCIL MEMBERS:

ATTEST: _____
City Clerk of the City of Hayward

APPROVED AS TO FORM:

City Attorney of the City of Hayward

CONDITIONS OF APPROVAL**July 5, 2016****Gading One – Tony Dutra, Gading Ventures LLC (Applicant/Owner)****Zone Change and Vesting Tentative Tract Map Application No. 201600059 (Tract 8319)****Zone Change from Single Family Residential to Planned Development (PD), and Vesting Tentative Tract Map 8319 for the subdivision and construction of 20 single-family homes on a 1.75-acre site at 25906 Gading Road.****GENERAL**

1. In accordance with Zoning Ordinance §10-1.2500 (Planned Development District), this approval is for the Preliminary Development Plan, subject to all conditions listed below, included herein as:

Exhibit A –Planned Development and Vesting Tentative Tract Map 8319 submitted by Gading Ventures, LLC on March 7, 2016.
2. The project approval shall coincide with the approval period for the Vesting Tentative Tract Map. If a building permit is issued for construction of improvements authorized by the Zone Change approval, said approval shall be void two years after issuance of the building permits, or three years after approval of Precise Plan application, whichever is later, unless the construction authorized by the building permits has been substantially completed or substantial sums have been expended in reliance upon the Precise Plan approval.
3. This approval is also tied to Vesting Tentative Tract Map 8319 and all conditions of approval of that map shall also apply to this approval.
4. This approval is subject to the Mitigation Monitoring and Reporting Program included as Conditions of Approval #13 through #20 and in the City's Project files as Exhibit B.
5. The subdivider shall assume the defense of and shall pay on behalf of and hold harmless the City, its officers, employees, volunteers and agents from and against any or all loss, liability, expense, claim costs, suits and damages of every kind, nature and description directly or indirectly arising from the performance and action of this permit.

PRECISE PLAN SUBMITTAL

6. In accordance with Zoning Ordinance §10-1.2550 and prior to submitting a building permit application, a Precise Development Plan shall be submitted for review and approval.
7. The Precise Development Plan shall be in substantial conformance with the approved

Preliminary Development Plan and incorporate conditions herein, and shall be submitted in advance of or in conjunction with the subdivision improvement plans and Final Map.

8. The project approval includes the following project amenities to support the finding required to be made that “any latitude or exception(s) to development regulations or policies is adequately offset or compensated for by providing functional facilities or amenities not otherwise required or exceeding other required development standards”. These four (4) amenities include:
- Photovoltaic solar systems shall be installed on all units.
 - Covered front porches on all of the homes to enhance and strengthen the streetscape.
 - A small private park area with benches and bike racks for residents to utilize as a place to gather and interact. This common open space amenity is not required of single-family detached homes, but is being provided to offset the reduced setback and yard areas
 - Six of the proposed units include a bedroom and full bathroom on the ground floor to support multi-generational living.
9. The Precise Development Plan shall include the following information and/or details:
- a. A copy of these conditions of approval shall be included on a full-sized sheet(s).
 - b. Proposed location for construction staging, designated areas for construction employee parking (on- and off-site), construction office, sales office (if any), hours of construction, provisions for vanpooling construction workers or having them use transit to access the site, provisions for noise and dust control, and common area landscaping.
 - c. Details of address numbers shall be provided. Address number shall be decorative. Building addresses shall be minimum 4-inch self-illuminated or 6-inch on contrasting background. Address numbers shall be installed so as to be visible from the street.
 - d. Proposed locations, heights, materials and colors of all walls and fences.
 - e. A minimum of one exterior hose bib shall be provided for each residential unit.
 - f. Proposed pavement materials for all drive aisles, parking areas, and pedestrian paths. All surfaces should be enhanced by the use of decorative pavement materials such as colored, stamped concrete (bomanite or equal), brick, concrete interlocking pavers or other approved materials.
 - g. Proposed mailbox design and locations, subject to Post Office approval. All mailboxes shall be locking mailboxes.
 - h. A final lighting plan prepared by a qualified illumination engineer shall be included to show exterior lighting design. The final lighting plan shall incorporate pedestrian scale lighting along the sidewalk within and adjacent to the development (Gading Road). All lighting shall be erected and maintained so that adequate lighting is provided along the private street. The Planning Director shall approve the design and location of lighting fixtures, which shall reflect the

architectural style of the building(s). Exterior lighting shall be shielded and deflected away from neighboring properties and from windows of houses within the project.

- i. All air conditioners and utility connections for air conditioners shall be located behind solid board fences or walls and shall not exceed the height of the fence or wall, unless otherwise approved. Infrastructure for air conditioning systems is required to be installed as a standard feature.
 - j. Proposed color and materials board for all buildings, fences and walls. No changes to colors shall be made after construction unless approved by the Planning Director.
 - k. All above-ground utility meters, mechanical equipment and water meters shall be enclosed within the buildings or shall be screened with shrubs and/or an architectural screen.
 - l. No mechanical equipment, other than solar panels, shall be placed on the roof unless it is completely screened from view by the proposed roof structure. All roof vents shall be shown on roof plans and elevations. Vent piping shall not extend higher than required by building code. Roof apparatus, such as vents, shall be painted to match the roof color.
 - m. Large expanses of blank wall shall not be allowed. Articulate or otherwise treat such expanses to avoid bulkiness.
 - n. An area within each garage for individual garbage and recycling receptacles shall be provided and shall be clear of the required area for two cars. As an alternative, an area within the fenced side yard may be used for the garbage and recycling containers but shall be shown.
 - o. All parking stall dimensions shall conform to the City's Off-street Parking Ordinance. All two car garages shall have minimum interior dimensions of 20-foot width by 19-foot depth. The dimensions shall be shown on plans. No doors, stairs, landings, laundry facilities, trash/recycle containers or HVAC shall project within the required interior parking areas.
 - p. The architectural elements along front elevations (shutters, metal railings, corbels, etc.) shall be incorporated into the rear elevations of each unit and the side elevations of lots #1 and #20 that face Gading Road.
 - q. A roof overhang over the rear door of each unit shall be incorporated into the design of each home where architecturally appropriate.
10. Any proposal for alterations to the proposed site plan and/or design which does not require a variance to any zoning ordinance standard must be approved by the Development Services Director or his/her designee, prior to implementation.
 11. Details of all project amenities shall be submitted for review and approval by the Planning Director during the Precise Plan phase of the project.
 12. The project shall comply with the 2013 California Energy Code Section 110.10 for Solar Ready Homes, involving coordination between the project architect and energy consultant regarding the design and orientation of roof surfaces.

Mitigation Measures

13. **Mitigation Measure AIR-1: The construction contractor(s) shall implement the following BMPs during project construction:**
- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
 - All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
 - All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
 - All vehicle speeds on unpaved roads shall be limited to 15 mph.
 - All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible and feasible. Building pads shall be laid as soon as possible and feasible after grading, unless seeding or soil binders are used.
 - Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
 - All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
 - Post a publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.
14. **Mitigation Measure BIO-1:** If construction activities commence outside the nesting season (generally September 1 through February 28), pre-construction surveys are not required. However, if construction commences outside the nesting season and extends into the nesting season, and is suspended for more than 14 days, a pre-construction survey that is detailed in **Mitigation Measure BIO-2**, below, shall be implemented.
15. **Mitigation Measure BIO-2:** If construction commences during the nesting season (March 1 through August 31), a pre-construction survey for active nests shall be conducted within 15 days prior to the start of work. Given the urban setting of the project site and the construction staging area, the radius of the pre-construction survey will be determined in consultation with the California Department of Fish and Wildlife

(CDFW). Typically, a 250-foot buffer for passerines and other unlisted/non-raptor species, 500-foot buffer for unlisted raptor species, and 0.5-mile buffer for listed raptor species are required. However, exceptions can be made based on the species of bird nesting, activities proposed, and for noise attenuation provided by intervening buildings in urban areas. Once the survey area is established, a survey of all appropriate nesting habitat will be conducted to locate any active nests. In the event that active nests are identified, appropriate buffer zones and types of construction activities restricted within the buffer zones will be determined through consultation with the CDFW. The buffer zones will be implemented and maintained until the young birds have fledged and no continued use of the nest is observed, as determined by a qualified biologist.

16. **Mitigation Measure BIO-3:** The applicant shall follow all recommendations in the tree evaluation report including protection of all trees to be preserved during all phases of the development and replacement of all removed trees based on the value of the removed trees:

Design recommendations

1. Include the location and tag numbers on all plans.
2. Allow the Consulting Arborist the opportunity to review project plans, including but not limited to, site, grading, drainage and landscape plans.
3. Use only herbicides safe for use around trees and labeled for that use, even below pavement.

Pre-construction and demolition treatments and recommendations

1. Establish a Tree Protection Zone at the property line.
2. Trees to be removed shall be felled so as to fall away from Tree Protection Zone and avoid pulling and breaking of roots of trees to remain. If roots are entwined, the consultant may require first severing the major woody root mass before extracting the trees, or grinding the stump below ground.
3. Trees to be retained will require pruning to provide clearance. All pruning is to be performed by an ISA Certified Arborist or Certified Tree Worker and shall adhere to the latest editions of the ANSI Z133 and A300 standards as well as the ISA Best Management Practices for Tree Pruning. Pruning contractor shall have the C25/D61license specification.

Tree protection during construction

1. Prior to beginning work, the contractors working in the vicinity of trees to be preserved are required to meet with the Consulting Arborist at the site to review all work procedures, access routes, storage areas and tree protection measures.

2. Any grading, construction, demolition or other work that is expected to encounter tree roots should be monitored by the Consulting Arborist.
 3. If injury should occur to any tree during construction, it should be evaluated as soon as possible by the Consulting Arborist so that appropriate treatments can be applied.
 4. Fences have been erected to protect trees to be preserved. Fences are to remain until all site work has been completed. Fences may not be relocated or removed without permission of the project manager.
 5. Any additional tree pruning needed for clearance during construction must be performed by a qualified arborist and not by construction personnel.
17. All trees shall be irrigated on a schedule to be determined by the Consulting Arborist. Each irrigator shall wet the soil within the Tree Protection Zone to a depth of 30”.
18. **Mitigation Measure CUL-1:** In the event human remains, archaeological resources, paleontological resources, prehistoric artifacts are discovered during construction excavation, the following procedures shall be followed:
- Construction and/or excavation activities shall cease immediately and the Planning Division shall be notified.
 - A qualified archaeologist shall be consulted to determine whether any such material is significant prior to resuming groundbreaking construction activities.
 - Standardized procedures for evaluating accidental finds and discovery of human remains shall be followed as prescribed in Section 15064.5 of the California Environmental Quality Act.
 - Standard procedures for grading operations would be followed during development, which require that such remains or resources are discovered grading operations are halted and the resources/remains evaluated by a qualified professional and, if necessary mitigation plans are formulated and implemented.
19. **Mitigation Measure GEO-1:** Prior to issuance of a Building permit, the applicant shall conduct a site- specific design level geotechnical evaluation and submit that for review and approval and any recommendations shall be incorporated into the final design of the project.
20. **Mitigation Measure NOI-1: The following measures shall be incorporated into the proposed project to reduce interior noise levels:**
- A qualified acoustical consultant shall review the final site plan, building elevations, and floor plans prior to construction and recommend building treatments to reduce interior noise levels to 45 dB(A) Ldn or lower. Treatments would include, but are not limited to, sound-rated windows and doors, sound-rated wall and window

constructions, acoustical caulking, protected ventilation openings, etc. The specific determination of what noise insulation treatments are necessary shall be conducted on a unit-by-unit basis during final design of the project. Results of the analysis, including the description of the necessary noise control treatments, shall be submitted to the City, along with the building plans and approved design, prior to issuance of a building permit.

- Provide a suitable form of forced-air mechanical ventilation, as determined by the local building official, for all residences on the project site, so that windows can be kept closed at the occupant's discretion to control interior noise and achieve the interior noise standards.
- A noise barrier (solid fence) shall be installed along Gading Road for the backyards of Lots 1 and 20 to reduce the exterior noise levels to 60 dB or lower. Details shall be determined during the design phase by a qualified acoustical consultant

PRIOR TO SUBMITTAL OF SUBDIVISION IMPROVEMENT PLANS AND FINAL MAP

21. In conjunction with or subsequent to the approval of the Precise Plan, the applicant/developer shall submit subdivision improvement plans including Landscape and irrigation plans and a final map application for the entire project. Said improvement plans and final map shall meet all City standards and submittal requirements except as expressly approved for this Planned Development. The following information shall be submitted with, or in conjunction with, improvement plans and final map. The City reserves the right to include more detailed conditions of approval regarding required infrastructure based on these more detailed plans.
22. Unless otherwise stated, all necessary easements shall be dedicated, and all improvements shall be designed and installed, at no cost to the City of Hayward.
23. Unless indicated otherwise, the design for development shall comply with the following:
 - a) All improvements shall be designed and constructed in accordance with the City of Hayward Municipal Code – Chapter 10, Articles 1 and 3, and Standard Specifications and Details.
 - b) All construction shall meet the California Building Codes (CBC) and all applicable City of Hayward Building Codes and amendments.
 - c) Design and construction of all pertinent life safety and fire protection systems shall meet the California Fire Code and all applicable City of Hayward Fire Codes and amendments.
24. A Registered Civil Engineer shall prepare all Civil Engineering improvement plans; a Licensed Architect shall prepare all architectural plans; and a Licensed Landscape Architect shall prepare all landscape unless otherwise indicated herein.

25. The developer shall not obstruct the noted sight distance areas. Overall cumulative height of the grading, landscaping & signs as determined by sight distance shall not exceed 2 feet when measured from street elevation.
26. All existing public utilities shall be protected in place and if necessary relocated as approved by the City Engineer. No permanent structure is permitted within City easements and no trees or deep rooted shrubs are permitted within City utility easements, where the easement is located within landscape areas.
27. **Prior to any work within public right of way or City easement, the developer shall obtain an encroachment permit from the City.**
28. The applicant shall be responsible for obtaining permits or approval from all affected agencies or private parties. A copy of these permits or approval to the City shall be included with your building permit application submittal, as applicable.

Subdivision Improvement Plans

29. Subdivision Improvement Plans shall be approved in concurrence with the Precise Development Plan. Submit the following proposed improvement plans with supporting documents, reports and studies:
 - a) A detailed drainage plan, to be approved by the Alameda County Flood Control and Water Conservation District (ACFC&WCD) and the City Engineer, designing all on-site drainage facilities to accommodate the runoff associated with a ten (10) year storm and incorporating onsite storm water detention measures sufficient to reduce the peak runoff to a level that will not cause capacity of downstream channels to be exceeded. Existing offsite drainage patterns, i.e., tributary areas, drainage amount and velocity shall not be altered by the development. The detailed grading and drainage plan with supporting calculations and a completed Drainage Review Checklist shall be approved by the City Engineer and by the ACFC&WCD prior to issuance of any construction or grading permit.
 - b) A detailed Stormwater Treatment Plan and supporting documents, following City ordinances and conforming to Regional Water Quality Control Board's Staff recommendations for new development and redevelopment controls for storm water programs.
30. An encroachment permit shall be obtained from ACFC & WCD prior to commencement of any work within the Flood Control District right-of-way and for the construction, modification or connection to District-maintained facilities. All workmanship, equipment and materials shall conform to District standards and specifications.

Storm Water Quality Requirements

31. The Developer shall comply with the regional permits requirements for both pre-construction and post-construction requirements. Storm water management shall be in compliance with Municipal Regional Permit.
32. The following materials related to the Storm water quality treatment facility requirements shall be submitted with improvement plans and/or grading permit application:
 - a) The owner/developer shall enter into a City's standard "Storm Treatment Measures Maintenance Agreement" (as prepared by the City and is available in the Engineering and Transportation Division); the Maintenance Agreement shall be recorded with the Alameda County Recorder's Office to ensure that the maintenance is bound to the property in perpetuity.
 - b) Storm Water Pollution Prevention Plan (SWPPP) shall be submitted to the City for review and approval by the City Engineer. All reports such as Soil Report, SWPPP, and SWMP are to be submitted in bound form. The Soil Report and SWMP shall be wet-stamped and signed by the engineer. The certification page of the SWPPP shall be signed by a Qualified SWPPP Developer (QSD) person who prepared the report.
 - c) Before commencing any grading or construction activities at the project site, the developer shall obtain a National Pollutant Discharge Elimination System (NPDES) permit and provide evidence of filing of a Notice of Intent (NOI) with the State Water Resources Control Board.
 - d) The project plans shall include the storm drain design in compliance with post-construction stormwater requirements to provide treatment of the stormwater according to the National Pollutant Discharge Elimination System (NPDES) permit's numeric criteria. The design shall comply with the C.3 established thresholds and shall incorporate measures to minimize pollutants to the maximum extent practicable (MEP).
 - e) The project plans shall identify Best Management Practices (BMPs) appropriate to the uses conducted on-site in order to limit the entry of pollutants into storm water runoff to the maximum extent practicable.
 - f) The proposed BMPs shall be designed to comply with the hydraulic sizing criteria listed in Provision C.3 of the Alameda County Clean Water Program (ACCWP) NPDES permit (page 30). In addition, the California Stormwater Quality Association's Stormwater best Management Practice Handbook New Development and Redevelopment, Subsection 5.5 on pages 5-12 has a section titled "BMP Design Criteria for Flow and Volume". These materials are available on the internet at www.cabmphandbooks.com
 - g) The project shall be designed with a Bioretention Treatment Area and shall use a Bioretention Soil Mix (BSM) per Attachment L of the C.3 Stormwater Technical Guidance dated May 14, 2013, with a minimum infiltration rate of 5 inches per hour.

- h) All inlet rims in the Bioretention Treatment Area (BTA) shall be 6" minimum above the flow line of the BTA. The design of the longitudinal flow line shall be level.
 - i) The following documents shall be completed and submitted with the improvement and/or grading plans:
 - i. Hydromodification Management Worksheet;
 - ii. Infiltration/Rainwater Harvesting and Use Feasibility Screening Worksheet;
 - iii. Development and Building Application Information Impervious Surface Form;
 - iv. Project Applicant Checklist of Stormwater Requirements for Development Projects;
 - v. C.3 and C.6 Data Collection Form; and,
 - vi. Numeric Sizing Criteria used for stormwater treatment (Calculations).
33. The developer shall be responsible for ensuring that all contractors are aware of all storm water quality measures and implement such measures. Failure to comply with the approved construction BMPs will result in the issuance of correction notices, citations or a project stop order.

Private Streets and Court (Common Driveway)

- 34. Any damaged and/or broken curb, gutter and sidewalks along the property frontages shall be removed and replaced as determined by the City.
- 35. The on-site streetlights and pedestrian lighting shall be LED lights and have a decorative design approved by the Planning Director. The locations of the lights shall be shown on the improvement plans and shall be approved by the City Engineer. Submit photometric plans with the improvement plans. Such fixtures shall have shields to minimize "spill-over" lighting on adjacent properties that are not part of the tract.
- 36. Proposed private court (common driveway) improvements shall be designed, generally reflective of the alignment and width shown on the submitted vesting tentative tract map, and as approved by the City Engineer. Unless otherwise specified herein, all private courts shall incorporate a cross-section of a 25-foot-wide right-of-way with a 24-foot curb-to-curb width, accommodating two travel lanes.
- 37. The private court pavement sections shall be designed to public street standards. The private court shall be designed with a TI of five and minimum AC thickness of four inches and AB of eight inches.
- 38. The permeable pavers to be used have 100% permeability by using Hydro-Flo Pavers or equal.
- 39. All areas with permeable pavers shall have a minimum 6" perforated pipe to collect all percolated water.

Public Streets (Gading Road)

40. Any damaged and/or broken curb, gutter and sidewalks along the property frontages shall be removed and replaced as determined by the City.
41. All existing driveways to be abandoned shall be removed and replaced with standard curb, gutter and sidewalk.

Storm Drainage

42. The project streets, driveways, and parking areas shall be designed to facilitate street sweeping, including the layout of tree and handicap ramp bulb outs. The HOA shall be responsible for street sweeping on a regular basis.
43. The project shall also include erosion control measures to prevent soil, dirt, debris and contaminated materials from entering the storm drain system, in accordance with the regulations outlined in the ABAG Erosion and Sediment Control Handbook.
44. Storm water inlets shall be installed at the curb face per the City of Hayward Standard Details. The design and location shall be approved by the City Engineer.
45. Improvements for storm drain system shall incorporate the following:
 - a) The locations and design of storm drains shall meet the City's standard design and be approved by the City Engineer and if necessary, the Alameda County Flood Control and Water Conservation District (ACFC&WCD). Any alternative design shall be approved by the City Engineer prior to installation.
 - b) Storm drain pipes in streets and courts shall be a minimum of twelve inches in diameter with a minimum cover of three feet over the pipe.
 - c) The latest edition of the Alameda County Flood Control and Water Conservation District's Hydrology and Hydraulics Criteria Summary shall be used to determine storm drainage runoff. A detailed grading and drainage plan with supporting calculations and a completed Drainage Review Checklist shall be submitted, which shall meet the approval of the Alameda County Flood Control and Water Conservation District (ACFC&WCD) and the City. Development of this site shall not augment runoff to the ACFC&WCD's downstream flood control facilities. The hydrology calculations shall substantiate that there will be no net increases in the quantity of runoff from the site versus the flow rate derived from the original design of downstream facilities.
 - d) The project shall not block runoff from, or augment runoff to, adjacent properties. The drainage area map developed for the project hydrology design shall clearly indicate all areas tributary to the project area. The developer is required to mitigate unavoidable augmented runoffs with offsite and/or on-site improvements.

- e) No surface runoff is allowed to flow over the sidewalks and/or driveways. Area drains shall be installed behind the sidewalks to collect all runoff from the project site.
- f) All storm drain inlets must be labeled "No Dumping - Drains to Bay," using City-approved methods.
- g) The starting water surface elevation(s) for the proposed project's hydraulic calculations and the corresponding determination of grate/rim elevations for all the on-site storm drainage structures shall be based on Federal Emergency Management Agency's Flood Insurance Study for the 100-year storm event
- h) Post-development flows should not exceed the existing flows. If the proposed development warrants a higher runoff coefficient or will generate greater flow, mitigation measures shall be implemented.

Sanitary Sewer System

- 46. All sewer mains and appurtenances shall be constructed in accordance to the City's "Specifications for the Construction of Sewer Mains and Appurtenances (12" Diameter or Less)," latest revision at the time of permit approval (available on the City's website at <http://user.govoutreach.com/hayward/faq.php?cid=11188>). Sewer cleanouts shall be installed on each sewer lateral at the connection with the building drain, at any change in alignment, and at uniform intervals not to exceed 100 feet. Manholes shall be installed in the sewer main at any change in direction or grade, at intervals not to exceed 400 feet, and at the upstream end of the pipeline.
- 47. The development's sanitary sewer mains and manholes shall be public, owned and maintained by the City. If the sewer mains are located in a private roadway, either the entire roadway shall be a public utility easement or a minimum 10' wide easement shall be granted to the City.
- 48. Each single family dwelling unit shall have an individual sanitary sewer lateral. The sewer laterals shall have cleanouts and be constructed per City Standard Detail SD-312.
- 49. The developer shall be responsible for payment of sewer connection fees at the current rates that the time the application for water and sewer service is submitted.

Water System

- 50. All public water mains and appurtenances shall be constructed in accordance to the City's "Specifications for the Construction of Water Mains (12" diameter or less) and Fire Hydrants," latest revision at the time of permit approval (available on the City's website at <http://user.govoutreach.com/hayward/faq.php?cid=11188>).
- 51. The development's proposed water main and valves shall be public, owned and maintained by the City. If the water mains are located in a private roadway, either the entire roadway shall be a public utility easement or a minimum 10' wide easement shall be granted to the City.

52. All water mains shall be looped. Dead end water mains are not allowed. Water mains must be connected to other water mains.
53. All connections to existing water mains shall be performed by City Water Distribution Personnel at the applicant's/developer's expense.
54. All water services from existing water mains, if any, shall be installed by City Water Distribution Personnel at the applicant's/developer's expense. The developer may only construct new services in conjunction with the construction of new water mains.
55. Domestic & Fire Services:
- a. **Domestic:** Each single-family residence (SFR) shall have an individual domestic water meter. Currently, the cost for a new residential water meter for a SFR (any size up to 1") and service line is \$11806, each (\$3500 installation fee + \$8106 facilities fee + \$200 radio read fee). If the new services are constructed by the applicant/developer in conjunction with their construction of the new water main, the installation fee is reduced to \$310, for a total of \$8616 each service.
 - b. **Fire:** Each structure shall have its own fire service, sized per the requirements of the Fire Department. Fire services shall have an above ground Double Check Valve Assembly, per City Standards SD-201 and SD-204.
 - c. **Combined Residential Services:** The development could use combined residential domestic and fire services for each residence. Residential combined domestic and fire services are allowed, per City Standard SD-216. The minimum size for a residential fire service connection is 1 inch (combined or not) and the maximum size for combined services is 2 inches. If the calculated fire demand exceeds 160 GPM, a separate fire service will be required. Note that, per CBC 2010 R313, flow-through or multipurpose systems may not require a backflow device (SD-216 is attached). Also note that combined services must connect directly to the water main (manifold layouts are not allowed).
56. **Irrigation:** A separate irrigation meter must be installed for development landscaping. The applicant/developer shall install an above ground Reduced Pressure Backflow Prevention Assembly (RPBA) on each irrigation water meter, per SD-202. Backflow preventions assemblies shall be at least the size of the water meter or the water supply line on the property side of the meter, whichever is larger.
57. Per the City of Hayward Bay Friendly Water Efficient Landscape Ordinance, the following shall be installed in each residence:
- Basic "laundry to landscape" plumbing
 - Minimum fifty gallon covered rain catchment device
58. All domestic and irrigation water meters shall be radio-read type.

59. Water meters and services are to be located a minimum of two feet from top of driveway flare as per SD-213 thru SD-218.
60. Water mains and services, including the meters, must be located at least 10 feet horizontally from and one-foot vertically above any parallel pipeline conveying untreated sewage (including sanitary sewer laterals), and at least four feet from and one foot vertically above any parallel pipeline conveying storm drainage, per the current California Waterworks Standards, Title 22, Chapter 16, Section 64572. The minimum horizontal separation distances can be reduced by using higher grade (i.e., pressure) piping materials.
61. Where a public water main is in an unpaved easement or under decorative, stamped, or colored concrete, including turf-blocks), the water main shall be constructed of Ductile iron. Shut-off valves are required where a water main transitions from a paved area to an unpaved easement.
62. Water service is available from the City of Hayward and is subject to standard conditions and fees in effect at the time of application.

Solid Waste

63. Applicants must comply with applicable City standards to obtain building permits, as follows:
 - a. Residential Collection of Garbage and Recyclables: Residents are required to place their garbage, recycling, and organics carts at the curb for weekly collection service by contracted service providers:
 - i. The standard type of garbage, recycling, and organics containers are (1) 32-gallon cart for Garbage, (1) 64-gallon cart for Recycling, and (1) 64-gallon cart for Organics.
 - ii. The total space required for the standard service is approximately 3 feet by 9 feet. Sufficient space should be allocated in the garage to allow residents to keep the containers inside. Alternatively, the containers may be kept in a side yard behind a fence. Trash and recycle containers shall be stored out of public view on non-pickup days.
 - iii. Residents shall not place carts at the curb any earlier than 6:00 a.m. the day before scheduled collection, and are required to retrieve them no later than midnight the days the carts are emptied. ([Hayward Municipal Code Section 5-1.15](#)).
 - b. Requirements for Recycling Construction & Demolition Debris: City regulations require that applicants for all construction, demolition, and/or renovation projects, in excess of \$75,000 (or combination of projects at the same address with a cumulative value in excess of \$75,000) must recycle all asphalt and concrete and all other materials generated from the project. Applicants must complete the Construction & Demolition Debris Recycling Statement, a *Construction and Demolition*

Debris Recycling Summary Report, and weigh tags for all materials disposed during the entire term of the project, and obtain signature approval from the City's Solid Waste Manager prior to any off haul of construction and demolition debris from the project site.

Other Utilities

64. All service to the development shall be an "underground service" designed and installed in accordance with the Pacific Gas and Electric Company, AT&T (phone) Company and Comcast cable company regulations. Transformers and switch gear cabinets shall be placed underground unless otherwise approved by the Planning Director and the City Engineer. Underground utility plans must be submitted for City approval prior to installation.
65. All proposed surface-mounted hardware (fire hydrants, electroliers, etc.) along the proposed streets shall be located outside of the sidewalk within the proposed Public Utility Easement in accordance with the requirements of the City Engineer or, where applicable, the Fire Chief.
66. The developer shall provide and install conduits and junction boxes to allow for the installation of future fiber optic network within the subdivision, which will be owned and maintained by the City.
67. All utilities shall be designed in accordance with the requirements of the City of Hayward and applicable public agency standards.

Landscape and Irrigation Plans

68. Park Dedication In-Lieu Fees are required for all new dwelling units. Fees shall be those in effect at the time of issuance of the building permit.
69. Prior to approval of a planning or building permit, detailed landscape and irrigation plans shall be reviewed and approved by the City. The plans shall be prepared by a licensed landscape architect on an accurately surveyed base plan. The plans shall fully comply with the City's *new Bay-Friendly Water Efficient Landscape Ordinance (California Building Code Title 23)*. *The plans shall also comply with other relevant sections in Municipal Codes.* Dripline of the existing offsite trees shall be shown on the plan.
70. Front yard tree planting: Every home shall have a minimum one twenty-four-inch box tree in the front yard setback area without an exception.
71. Street Tree Planting on Gading Road: Minimum one twenty-four-inch box tree shall be planted at every twenty to forty feet of the street frontage. At minimum two trees shall be planted.

72. *Arbutus unedo* Compact is usually a larger shrub with no vertical clearance, and should not be listed under tree even if twenty-four-inch box tree would be specified.
73. *Pyrus calleryana* species have not performed well in Hayward. Consider specifying another tree species in place with the similar effect.
74. Plant spacing: Plants shall be spaced to allow mature growth without routine cutbacks from walkways, curb or structure in compliance with the City's landscape ordinance. Adjust spacing for *Arctostaphylos* Emerald Carpet.
75. Bio-treatment area: Minimum twenty-four inches (two feet) of leveled area shall be provided before side slope could begin.
76. Permeable pavers shall be laid in herringbone pattern preferably with interlocking pattern.
77. The trees should be twenty feet from the corner, a minimum of five feet from any underground utilities, a minimum of fifteen feet from a light pole, and a minimum thirty feet from the face of a traffic signal, or as otherwise specified by the city. Root barrier shall be provided for all trees that are located within seven feet of paved edges or structure. Trees shall be planted according to the City Standard Detail SD-122.
78. Root barriers shall be installed linearly against the paving edge in all instances where a tree is planted within seven of pavement or buildings, and as directed by the landscape architect.
79. Landscape and tree improvements shall be installed according to the approved plans prior to the occupancy of each building. All common area landscaping, irrigation and other required improvements shall be installed prior to acceptance of tract improvements, or occupancy of 80% of the dwelling units, whichever first occurs and a Certificate of Completion, as-built Mylar and an Irrigation Schedule shall be submitted prior to the Final Approval of the landscaping for the Tract to the Engineering Department by the developer. (for Subdivisions)
80. Upon completion of landscape and irrigation installation, the project landscape architect shall conduct an inspection for compliance with the approved landscape and irrigation improvement plans, and the conditions of approval above. Once the installation is fully accepted, Attachment C. Document of Final Acceptance and Appendix C. Certificate of Completion Part 1 through Part 7 shall be completed by the project landscape architect and submitted to City Landscape Architect and request for a landscape inspection for the City's approval for issuance of Certificate of Occupancy. Re-inspection fees of \$212 shall be applied for each subsequent inspection

Fire Protection

81. All public streets, private streets and private courts shall be designed, engineered and maintained to withstand 75,000 lbs. gross vehicle weight of fire apparatus and shall be surfaced so as to provide all-weather driving capability. Such standard is also applicable to pavers or decorative concrete.
82. Fire apparatus access roads shall be 20 to 26 feet wide shall be posted on both sides as a fire lane; 26 feet to 32 feet shall be posted on one side of the road as a fire lane. "No Parking" sign shall meet the City of Hayward Fire Department fire lane requirements.
83. The required fire flow shall not be less than 1500gpm @ 20 PSI.
84. New fire hydrants shall be double steamer type equipped with (2) 4-1/2" outlets and (1) 2-1/2" outlet. Blue reflective fire hydrant blue dot markers shall be installed on the roadways indicating the location of the fire hydrants. Vehicular protection may be required for the fire hydrants.
85. Each new structure shall be protected with an Automatic Fire Sprinkler system in accordance with NFPA 13D Standards. *(Deferred Submittal)*
86. According to the requirement of Hayward Public Works Department, a static pressure of 80 PSI should be used when a water test data indicates a higher pressure. The residual pressure should be adjusted accordingly.
87. Underground fire service line serving NFPA 13D sprinkler system shall be installed in accordance with the Hayward Public Work Department SD-216. Water meters shall be minimum one-inch in diameter.
88. An audible alarm bell (device) shall be installed on the fire sprinkler system riser.
89. An interior audible alarm device shall be installed within the dwelling in a location so as to be heard throughout the home. The device shall activate upon any fire sprinkler system waterflow activity.
90. All bedrooms and hallway areas shall be equipped with smoke detectors, hard-wired with battery backup. Installation shall conform to the California Building Code (CBC).
91. CO detectors should be placed near the sleeping area on a wall about 5 feet above the floor. The detector may be placed on the ceiling. Each floor needs a separate detector.
92. All building units shall have approved address numbers, building numbers. Address identification of shall be placed in a position that is plainly legible and visible from the street or road fronting the property. Where access is by means of a private road and the building cannot be viewed from the public way, a monument, pole or other sign or means shall be used to identify the structure.

93. A minimum 4" self-illuminated address shall be installed on the front of the dwelling in a location so as to be visible from the street. Otherwise, a minimum 6" address shall be installed on a contrasting background and shall be in a location approved by the Fire Department.

Hazardous Materials

94. **Grading** – Prior to grading: Structures and their contents shall be removed or demolished under permit in an environmentally sensitive manner. Proper evaluation, analysis and disposal of materials shall be done by appropriate professional(s) to ensure hazards posed to development construction workers, the environment, future residents and other persons are mitigated.
95. **Wells, Septic Tank Systems or Subsurface Structures** – Any wells, septic tank systems and others subsurface structures shall be removed properly in order not to pose a threat to the development construction workers, future residents or the environment. These structures shall be documented and removed under permit from appropriate regulatory agency when required.
96. **Discovery of Potentially Hazardous Materials or Vessels/Containers** – The Hayward Fire Department's Hazardous Materials Office shall be notified immediately at (510) 583-4900 if hazardous materials are discovered during demolition or during grading. These shall include, but shall not be limited to, actual/suspected hazardous materials, underground tanks, vessels that contain or may have contained hazardous materials.
97. **Use of Hazardous Materials or Generation of Hazardous Waste** – During construction, hazardous materials used and hazardous waste generated shall be properly managed and disposed.

Final Tract Map

98. Prior to recordation, a proposed Final Tract Map shall be submitted for review by the City. The Final Tract Map shall be presented to the City Council for review and action. The City Council meeting will be scheduled approximately sixty (60) days after the Improvement Plans with supporting documents and Final Map are deemed technically correct, and Subdivision Agreement and Bonds are approved by the City. The executed Final Map shall be returned to the City Public Works Department if Final Map has not been filed in the County Recorder's Office within ninety (90) days from the date of the City Council's approval.
99. Prior to the recordation of the Final Tract Map, all documents that need to be recorded with the final map shall be approved by the City Engineer and any unpaid invoices or other outstanding charges accrued to the City for the processing of the subdivision application shall be paid.

100. Prior to or concurrent with Final Map recordation, developer shall dedicate necessary easements along Street frontages, including but not limited to 6-foot Public Utility Easement (PUE) along Gading Road frontage.
101. The final map shall reflect all easements needed to accommodate the project development. The private street (Street A) and driveway (Court A) shall be dedicated as a Public Utility Easement (PUE), Public Access Easement (PAE), Water Line Easement (WLE), Sanitary Sewer Easement (SSE), and Emergency Vehicle Access Easement (EVAE).
102. Prior to final map recordation, the developer shall obtain design approval and bond for all necessary public improvements along Gading Road frontage, including but not limited to the following:
 - A. Removal and installation of new curb, gutter, and sidewalk along entire Gading Road frontage.
 - B. Removal and installation of new ADA ramp on Gading and Huntwood intersection.
 - C. Grind, overlay and restripe half of Gading Road frontage from most southerly boundary to Huntwood intersection, with 2" hot mix asphalt, and dig outs and repair failed pavements as necessary.
 - D. Install necessary new street lights along the Gading Road frontage.
 - E. Remove, replace, and plant street trees along project frontages per City Landscape Architect direction.
 - F. Remove any power poles along the Gading frontage and underground related wires between. No overhead connection is allowed.

Plans for all public improvements shall be prepared on Mylar (22"x34" sheets) and developer shall submit a digital format of the Record Drawings (AutoCAD format is preferred) upon completion of improvements. The public facilities such as water meters, RP backflow preventers, sewer clean outs, etc., shall be placed so access is maintained and kept clear of traffic. All improvements must be in accordance with the City of Hayward standard detail and specs and built to the city Engineer's satisfaction, and accepted by the City prior to issuance of any first certificate of occupancy for the project.

Affordable Housing

103. The Affordable Housing Ordinance (AHO) applies to the project. Pursuant to the City's [Affordable Housing Ordinance](#), 10 percent of all detached single family residences in a project and 7.5 percent of all attached units must be set aside and sold at affordable prices to moderate-income households (households earning 120 percent of Area Median Income or less). If this option selected by the developer, prior to the approval of the Final Map, an Affordable Housing Plan (AHP) shall be submitted and approved by the Planning Director related to providing affordable housing units. The AHP shall conform to the requirements of the City's Affordable Housing Ordinance and will memorialize the obligations relevant to the compliance with inclusionary housing provisions by the

project owner. The AHO also allows developers the option to pay an Affordable Housing Impact Fee as established by the City's Master Fee Schedule. Affordable housing impact fees shall be paid either prior to issuance of a building permit or prior to approval of a final inspection or issuance of an occupancy permit. Regardless of the option chosen, no final inspection will be approved and no occupancy permit will be issued for any Dwelling Unit unless all required affordable housing impact fees have been paid in full.

PRIOR TO ISSUANCE OF BUILDING OR GRADING PERMITS AND CONSTRUCTION WITH COMBUSTIBLE MATERIALS

104. Pursuant to the Municipal Code §10-3.332, the developer shall execute a subdivision agreement and post bonds with the City that shall secure the construction of the public improvements. Insurance shall be provided per the terms of the subdivision agreement.
105. Prior to issuance of building permits, a final map that reflects and is in substantial compliance with the approved vesting tentative tract map, shall be approved by the City Engineer and is in the process for filing with the office of the Alameda County Clerk Recorder.
106. Prior to issuance of building permits, submit the following documents for review and approval, or for City project records/files:
 - a) Copy of the Notice of Intent filed with State Water Resources Control Board;
 - b) Engineer's estimate of costs, including landscape improvements;
 - c) Signed Final Map;
 - d) Signed Subdivision Agreement; and
 - e) Subdivision bonds.
107. Plans for building permit applications shall incorporate the following:
 - a) A copy of these conditions of approval shall be included on a full-sized sheet(s) in the plan set.
 - b) A lighting plan prepared by a qualified illumination engineer shall be included to show exterior lighting design. All exterior lighting shall be designed by a qualified lighting designer and erected and maintained so that light is confined to the property and will not cast direct light or glare upon adjacent properties or public rights-of-way. Such lighting shall also be designed such that it is decorative and in keeping with the design of the development. Exterior lighting shall be erected and maintained so that adequate lighting is provided in all common areas. The Planning Director or his/her designee shall approve the design and location of lighting fixtures, which shall reflect the architectural style of the buildings. Exterior lighting shall be shielded and deflected away from neighboring properties and from windows of proposed buildings.
 - c) Plans shall show that all utilities will be installed underground.

108. Required water system improvements shall be completed and operational prior to the start of combustible construction.
109. The developer/subdivider shall be responsible to adhere to all aspects of the approved Storm Water Pollution Prevention Plan (SWPPP) per the aforementioned condition of approval.
110. A representative of the project soils engineer shall be on the site during grading operations and shall perform such testing as deemed necessary by the City Engineer. The representative of the soils engineer shall observe all grading operations and provide any recommended corrective measures to the contractor and the City Engineer.
111. The minimum soils sampling and testing frequency shall conform to Chapter 8 of the Caltrans Construction Manual. The subdivider shall require the soils engineer to daily submit all testing and sampling and reports to the City Engineer.

PRIOR TO COMPLETION OF SITE IMPROVEMENTS AND ISSUANCE OF CERTIFICATES OF OCCUPANCY

During Construction

112. The developer shall ensure that unpaved construction areas are sprinkled with water as necessary to reduce dust generation. Construction equipment shall be maintained and operated in such a way as to minimize exhaust emissions. If construction activity is postponed, graded or vacant land shall immediately be revegetated.
113. All diesel powered equipment (≥ 100 horsepower) shall be California Air Resources Board (CARB) Tier 3 Certified or better.
114. The following control measures for construction noise, grading and construction activities shall be adhered to, unless otherwise approved by the Planning Director or City Engineer:
 - a. Grading and site construction activities shall be limited to the hours 8:00 AM to 5:00 PM Monday through Friday and no work on weekends and Holidays unless revised hours and days are authorized by the City Engineer. Building construction hours are subject to Building Official's approval;
 - b. Grading and construction equipment shall be properly muffled;
 - c. Unnecessary idling of grading and construction equipment is prohibited;
 - d. Stationary noise-generating construction equipment, such as compressors, shall be located as far as practical from occupied residential housing units;
 - e. Applicant/developer shall designate a "noise disturbance coordinator" who will be responsible for responding to any local complaints about construction noise. Letters shall be mailed to surrounding property owners and residents within 300 feet of the project boundary with this information and a copy provided to the Planning Division.

- f. The developer shall post the property with signs that shall indicate the names and phone number of individuals who may be contacted, including those of staff at the Bay Area Air Quality Management District, when occupants of adjacent residences find that construction is creating excessive dust or odors, or is otherwise objectionable. Letters shall also be mailed to surrounding property owners and residents with this information prior to commencement of construction and a copy provided to the Planning Division.
- g. Daily clean-up of trash and debris shall occur on Eden Avenue, Saklan Road, and other neighborhood streets utilized by construction equipment or vehicles making deliveries.
- h. Gather all construction debris on a regular basis and place them in a dumpster or other container which is emptied or removed on a weekly basis. When appropriate, use tarps on the ground to collect fallen debris or splatters that could contribute to storm water pollution;
- i. Remove all dirt, gravel, rubbish, refuse and green waste from the sidewalk, street pavement, and storm drain system adjoining the project site. During wet weather, avoid driving vehicles off paved areas and other outdoor work;
- j. The site shall be watered twice daily during site grading and earth removal work, or at other times as may be needed to control dust emissions;
- k. All grading and earth removal work shall follow remediation plan requirements, if soil contamination is found to exist on the site;
- l. Pave, apply water three times daily, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas and staging areas at construction sites;
- m. Sweep daily (with water sweepers) all paved access roads, parking areas and staging areas at construction sites;
- n. Sweep public streets daily if visible soil material is carried onto adjacent public streets;
- o. Apply (non-toxic) soil stabilizers or hydroseed to inactive construction areas (previously graded areas inactive for 10-days or more);
- p. Enclose, cover, water twice daily or apply (non-toxic) soil binders to exposed stockpiles (dirt, sand, etc.).
- q. Broom sweep the sidewalk and public street pavement adjoining the project site on a daily basis. Caked on mud or dirt shall be scraped from these areas before sweeping;
- r. No site grading shall occur during the rainy season, between October 15 and April 15, unless approved erosion control measures are in place.
- s. Install filter materials (such as sandbags, filter fabric, etc.) at the storm drain inlet nearest the downstream side of the project site prior to: 1) start of the rainy season; 2) site dewatering activities; or 3) street washing activities; and 4) saw cutting asphalt or concrete, or in order to retain any debris or dirt flowing into the City storm drain system. Filter materials shall be maintained and/or replaced as

necessary to ensure effectiveness and prevent street flooding. Dispose of filter particles in the trash;

- t. Create a contained and covered area on the site for the storage of bags of cement, paints, flammables, oils, fertilizers, pesticides or any other materials used on the project site that have the potential for being discharged to the storm drain system through being windblown or in the event of a material spill;
 - u. Never clean machinery, tools, brushes, etc., or rinse containers into a street, gutter, storm drain or stream. See "Building Maintenance/Remodeling" flyer for more information;
 - v. Ensure that concrete/gunite supply trucks or concrete/plasters finishing operations do not discharge washwater into street gutters or drains; and
 - w. The developer shall immediately report any soil or water contamination noticed during construction to the City Fire Department Hazardous Materials Division, the Alameda County Department of Health and the Regional Water Quality Control Board.
115. The minimum soils sampling and testing frequency shall conform to Chapter 8 of the Caltrans Construction Manual. The subdivider shall require the soils engineer to daily submit all testing and sampling and reports to the City Engineer.
116. In the event that human remains', archaeological resources, prehistoric or historic artifacts are discovered during construction of excavation, the following procedures shall be followed: Construction and/or excavation activities shall cease immediately and the Planning Division shall be notified. A qualified archaeologist shall be retained to determine whether any such materials are significant prior to resuming groundbreaking construction activities. Standardized procedure for evaluation accidental finds and discovery of human remains shall be followed as prescribed in Sections 15064.f and 151236.4 of the California Environmental Quality Act.
117. Prior to final inspections, all pertinent conditions of approval and all improvements shall be completed to the satisfaction of the Planning Director.
118. Prior to the issuance of Certificate of Occupancy, all landscape and irrigation shall be completed and installed in accordance with the approved plan and accepted by the project landscape architect prior to submitting a Certificate of Completion. The final acceptance form must be submitted prior to requesting an inspection with the City Landscape Architect. An Irrigation Schedule shall be submitted prior to the final inspection and acceptance of landscape improvements.
119. Landscape and tree improvements shall be installed according to the approved plans prior to the occupancy of each building. All common area landscaping, irrigation, and other required improvements shall be installed prior to acceptance of tract improvements, or occupancy of eighty percent of the dwelling units, whichever first occurs, and a Certificate of Completion, as-built Mylar and an Irrigation Schedule shall

be submitted prior to the Final Approval of the landscaping for the Tract to the Public Works – Engineering and Transportation Department by the developer.

Homeowners Association

120. Prior to the sale of any parcel, or prior to the acceptance of site improvements, whichever occurs first, Conditions, Covenants and Restrictions (CC&R's), creating a homeowners association (HOA) for the property, shall be reviewed and approved by the Planning Director and City Attorney and recorded. The CC&R's shall describe how the stormwater BMPs associated with privately owned improvements and landscaping shall be maintained by the association. The CC&Rs shall include the following provisions:

- a. The CC&R's shall state that the City of Hayward has the right to abate public nuisance conditions in the common area if the association or corporation fails to do so, and to assess the cost to the association, corporation or individual unit owners. In order to accomplish this, the CC&Rs shall contain the following typical statements:
 - i) In the event the Board fails to maintain the exterior portions of the common area so that owners, lessees, and their guest suffer, or will suffer, substantial diminution in the enjoyment, use or property value of the project, thereby impairing the health, safety, and welfare of the residents in the project, the City of Hayward, by and through its duly authorized officers and employees, shall have the right to enter upon the real property described in Exhibit "A" and to commence and complete such work as is necessary to maintain said exterior portions of the common area. The City shall enter and repair only if, after giving the Board written notice of the Board's failure to maintain the premises, the Board does not commence correction of such conditions in no more than 30 days from delivery of the notice and proceed diligently to completion. The Board agrees to pay all expenses incurred by the City of Hayward within 30 days of written demand. Upon failure by the Board to pay within said 30 days, the City of Hayward shall have the right to impose a lien for the proportionate share of such costs against each condominium or community apartment in the project.
 - ii) It is understood that by the provisions hereof, the City of Hayward is not required to take any affirmative action, and any action undertaken by the City of Hayward shall be that which, in its sole discretion, it deems reasonable to protect the public health, safety, and general welfare, and to enforce it and the regulations and ordinances and other laws.
 - iii) It is understood that action or inaction by the City of Hayward, under the provisions hereof, shall not constitute a waiver or relinquishment of any of its rights to seek redress for the violation of any of the provisions of these restrictions or any of the rules, regulations, and ordinances of the City, or of other laws by way of a suit in law or equity in a court of competent

jurisdiction or by other action.

- iv) It is further understood that the remedies available to the City by the provision of this section or by reason of any other provisions of law shall be cumulative and not exclusive, and the maintenance of any particular remedy shall not be a bar to the maintenance of any other remedy. In this connection it is understood and agreed that the failure by the Board to maintain the exterior portion of the common area shall be deemed to be a public nuisance, and the City of Hayward shall have the right to abate said condition, assess the costs thereof and cause the collection of said assessments to be made on the tax roll in the manner provided by Chapter 4, Article 1, of the Hayward Municipal Code or any other applicable law.
 - v) The City Council of the City of Hayward may, at any time, relinquish its rights and interest in the project as herein set forth by appropriate resolution. Any such relinquishment by the City Council shall be effective on the date that the resolution is adopted and a copy thereof is placed in the United States mail, postage prepaid, addressed to the Board. The Board shall execute and record a declaration reflecting such relinquishment within 10 days of receipt of a copy of the resolution.
- b. The above five paragraphs cannot be amended or terminated without the consent of the Hayward City Council.
 - c. Each owner shall automatically become a member of the association(s) and shall be subject to a proportionate share of maintenance expenses.
 - d. A reserve fund shall be maintained to cover the costs of improvements and landscaping to be maintained by the Association(s).
 - e. The HOA shall be managed and maintained by a professional property management company.
 - f. The HOA shall own and maintain the private access road, Private Court "A" and on-site storm drain systems in the development, excluding those located within the public right-of-way.
 - g. A provision that the building exteriors and fences shall be maintained free of graffiti. The owner's representative shall inspect the premises on a weekly basis and any graffiti shall be removed within 48 hours of inspection or within 48 hours of notification by the City.
 - h. The HOA shall maintain the common area irrigation system and maintain the common area landscaping in a healthy, weed-free condition at all times. The HOA representative(s) shall inspect the landscaping on a monthly basis and any dead or dying plants (plants that exhibit over 30% die-back) shall be replaced within fifteen days of notification to the homeowner. Plants in the common areas shall be replaced within two weeks of the inspection. Trees shall not be severely pruned, topped or pollarded. Any trees that are pruned in this manner shall be replaced with a tree species selected and size determined by the City Landscape Architect, within the timeframe established by the City and pursuant to the

Hayward Municipal Code.

- i. A tree removal permit is required prior to the removal of any protected tree, in accordance with the City's Tree Preservation Ordinance.
- j. The garage of each unit shall be maintained for off-street parking of two vehicles and shall not be converted to living or storage areas. The HOA shall conduct at least semi-annual inspections to confirm that all residents are using their garages for parking their cars and not for storage. Residents shall make garages available for such inspections, as appropriate. An automatic garage door opening mechanism shall be provided for all garage doors.
- k. Individual homeowners shall maintain in good repair the exterior elevations of their dwelling. The CC&Rs shall include provisions as to a reasonable time period that a unit shall be repainted, the limitations of work (modifications) allowed on the exterior of the building, and the right of the home owners association to have necessary work done and to place a lien upon the property if maintenance and repair of the unit is not executed within a specified time frame. The premises shall be kept clean and free of debris at all times. Color change selections shall be compatible with the existing setting.
- l. The HOA shall maintain all fencing, parking surfaces, common landscaping, lighting, drainage facilities, project signs, exterior building elevations, etc. The CC&Rs shall include provisions as to a reasonable time period that the building shall be repainted, the limitations of work (modifications) allowed on the exterior of the buildings, and its power to review changes proposed on a building exterior and its color scheme, and the right of the home owners association to have necessary work done and to place a lien upon the property if maintenance and repair of the unit is not executed within a specified time frame. The premises shall be kept clean.
- m. Any future major modification to the approved site plan shall require review and approval by the Planning Commission.
- n. On-site streetlights and pedestrian lighting shall be owned and maintained by the HOA and shall have a decorative design approved by the Planning Director and the City Engineer.
- o. Street sweeping of the private street and private parking stalls shall be conducted at least once a month.
- p. The association shall ensure that no less than 75 percent of the units shall be owner-occupied. The CC&Rs shall further provide that the leasing of units as a regular practice for business, speculative investment or other similar purpose is not permitted. However, to address special situations and avoid unusual hardship or special circumstances, such as a loss of job, job transfer, military transfer, change of school or illness or injury that, according to a doctor, prevents the owner from being employed, the CC&Rs may authorize the governing body to grant its consent, which consent shall not be unreasonably withheld, to a unit owner who wishes to lease or otherwise assign occupancy rights to a specified

lessee for a specified period.

Prior to the Issuance of Certificate of Occupancy or Final Report

121. All buildings shall be designed using the California Building Codes in effective at the time of submitting building permit applications.
122. All common area landscaping, irrigation and other required improvements shall be installed according to the approved plans.
123. All tract improvements, including the complete installation of all improvements relative to streets, fencing, sanitary sewer, storm drainage, water system, underground utilities, etc., shall be completed and attested to by the City Engineer before approval of occupancy of any unit. Where facilities of other agencies are involved, such installation shall be verified as having been completed and accepted by those agencies.
124. Park Dedication In-Lieu Fees are required for all new dwelling units. Fees shall be those in effect at the time of the Vesting Tentative Tract Map is approved. All Park dedication in-lieu fees shall be paid prior to issuance of a Certificate of Occupancy for a residential unit.
125. Landscaping shall be maintained in a healthy, weed-free condition at all times and shall be designed with efficient irrigation practices to reduce runoff, promote surface filtration, and minimize the use of fertilizers and pesticides, which can contribute to runoff pollution. The owner's representative shall inspect the landscaping on a monthly basis and any dead or dying plants (plants that exhibit over 30% dieback) shall be replaced within ten days of the inspection. Three inches deep mulch should be maintained in all planting areas. Mulch should be organic recycled chipped wood in the shades of Dark Brown Color. Trees shall not be severely pruned, topped or pollarded. Any trees that are pruned in this manner shall be replaced with a tree species selected by, and size determined by the City Landscape Architect, within the timeframe established by the City and pursuant to the Municipal Code. Irrigation system shall be tested periodically to maintain uniform distribution of irrigation water; irrigation controller shall be programmed seasonally; irrigation system should be shut-off during winter season; and the whole irrigation system should be flushed and cleaned when the system gets turn on in the spring.
126. The developer/subdivider shall be obligated for the following additional fees. The amount of the fee shall be in accordance with the fee schedule in effect at the time Vesting Tentative Tract Map was accepted as complete, unless otherwise indicated herein:
 - a) Supplemental Building Construction and Improvement Tax,
 - b) School Impact Fee
127. Final Hayward Fire Department inspection is required to verify that requirements for fire protection facilities have been met and actual construction of all fire protection

equipment have been completed in accordance with the approved plan. Contact the Fire Marshal's Office at (510) 583-4910 at least 24 hours before the desired final inspection appointment.

128. The improvements associated with the Pacific Gas and Electric Company, AT&T (phone) company and local cable company shall be installed to the satisfaction of the respective companies.
129. The Stormwater Treatment Measures Maintenance Agreement for the project, prepared by Public Works Engineering and Transportation Division staff, shall be signed and recorded in concurrence with the Final Map at the Alameda County Recorder's Office to ensure that the maintenance is bound to the property in perpetuity.
130. The applicant/subdivider shall submit an AutoCAD file format (release 2010 or later) in a CD of approved final map and 'as-built' improvement plans showing lot and utility layouts that can be used to update the City's Base Maps.
131. The applicant/subdivider shall submit an "as built" plans indicating the following:
 - a) Approved landscape and irrigation improvements;
 - b) All underground facilities, sanitary sewer mains and laterals, water services (including meter locations), Pacific Gas and Electric, AT&T (phone) facilities, local cable company, etc.;
 - c) All the site improvements, except landscaping species, buildings and appurtenant structures; and
 - d) Final Geotechnical Report.

Mitigation Monitoring and Reporting Program

**Zone Change and Vesting Tentative Tract Map (Tract 8319) Application No.
201600059;
Tony Dutra, Gading Ventures, LLC. (Applicant/Owner)**

July 5, 2016

Air-Quality

Mitigation Measure AIR-1 is proposed, which requires that the dust control BMPs put forth by the BAAQMD are implemented by the proposed project. With the implementation of the required BAAQMD recommended BMPs pursuant to Mitigation Measure AIR-1, the construction of the proposed project would not result in substantial emissions of fugitive dust, PM₁₀ or PM_{2.5}, and the impact associated with construction-period emissions of fugitive dust, PM₁₀ and PM_{2.5} would be less than significant.

Mitigation Measure AIR-1: The construction contractor(s) shall implement the following BMPs during project construction:

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 mph.
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible and feasible. Building pads shall be laid as soon as possible and feasible after grading, unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked

Exhibit B

by a certified mechanic and determined to be running in proper condition prior to operation.

- Post a publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.

Biological Resources

Mitigation Measure BIO-1: If construction activities commence outside the nesting season (generally September 1 through February 28), pre-construction surveys are not required. However, if construction commences outside the nesting season and extends into the nesting season, and is suspended for more than 14 days, a pre-construction survey that is detailed in Mitigation Measure BIO-2, below, will be implemented.

Mitigation Measure BIO-2: If construction commences during the nesting season (March 1 through August 31), a pre-construction survey for active nests will be conducted within 15 days prior to the start of work. Given the urban setting of the project site and the construction staging area, the radius of the pre-construction survey will be determined in consultation with the California Department of Fish and Wildlife (CDFW). Typically, a 250-foot buffer for passerines and other unlisted/non-raptor species, 500-foot buffer for unlisted raptor species, and 0.5-mile buffer for listed raptor species are required. However, exceptions can be made based on the species of bird nesting, activities proposed, and for noise attenuation provided by intervening buildings in urban areas. Once the survey area is established, a survey of all appropriate nesting habitat will be conducted to locate any active nests. In the event that active nests are identified, appropriate buffer zones and types of construction activities restricted within the buffer zones will be determined through consultation with the CDFW. The buffer zones will be implemented and maintained until the young birds have fledged and no continued use of the nest is observed, as determined by a qualified biologist.

Mitigation Measure BIO-3:

Design recommendations

1. Include the location and tag numbers on all plans.
2. Allow the Consulting Arborist the opportunity to review project plans, including but not limited to, site, grading, drainage and landscape plans.
3. Use only herbicides safe for use around trees and labeled for that use, even below pavement.

Pre-construction and demolition treatments and recommendations

4. Establish a **TREE PROTECTION ZONE** at the property line.

Exhibit B

5. Trees to be removed shall be felled so as to fall away from **TREE PROTECTION ZONE** and avoid pulling and breaking of roots of trees to remain. If roots are entwined, the consultant may require first severing the major woody root mass before extracting the trees, or grinding the stump below ground.
6. Trees to be retained will require pruning to provide clearance. All pruning is to be performed by an ISA Certified Arborist or Certified Tree Worker and shall adhere to the latest editions of the ANSI Z133 and A300 standards as well as the ISA Best Management Practices for Tree Pruning. Pruning contractor shall have the C25/D61 license specification.

Tree protection during construction

7. Prior to beginning work, the contractors working in the vicinity of trees to be preserved are required to meet with the Consulting Arborist at the site to review all work procedures, access routes, storage areas and tree protection measures.
8. Any grading, construction, demolition or other work that is expected to encounter tree roots should be monitored by the Consulting Arborist.
9. If injury should occur to any tree during construction, it should be evaluated as soon as possible by the Consulting Arborist so that appropriate treatments can be applied.
10. Fences have been erected to protect trees to be preserved. Fences are to remain until all site work has been completed. Fences may not be relocated or removed without permission of the project manager.
11. Any additional tree pruning needed for clearance during construction must be performed by a qualified arborist and not by construction personnel.
12. All trees shall be irrigated on a schedule to be determined by the Consulting Arborist. Each irrigation shall wet the soil within the TREE PROTECTION ZONE to a depth of 30”.

Implementation Responsibility: Project developer

Monitoring Responsibility: City of Hayward Planning Division

Timing: Prior to any project construction and during project construction

Cultural Resources

Mitigation Measure CUL-1: In the event human remains, archaeological resources, paleontological resources, prehistoric artifacts are discovered during construction excavation, the following procedures shall be followed:

- Construction and/or excavation activities shall cease immediately and the Planning Division shall be notified.

Exhibit B

- A qualified archaeologist shall be consulted to determine whether any such material is significant prior to resuming groundbreaking construction activities.
- Standardized procedures for evaluating accidental finds and discovery of human remains shall be followed as prescribed in Section 15064.5 of the California Environmental Quality Act.
- Standard procedures for grading operations would be followed during development, which require that such remains or resources are discovered grading operations are halted and the resources/remains evaluated by a qualified professional and, if necessary mitigation plans are formulated and implemented.

These standard measures would be conditions of approval should the project be approved; thus this impact would be less than significant with mitigation incorporated into the project.

Implementation Responsibility: Project developer

Monitoring Responsibility: City of Hayward Building Division

Timing: Prior to any project construction and during project construction

Geology

Mitigation Measure GEO-1: Prior to issuance of a Building permit, the applicant shall conduct a site- specific design level geotechnical evaluation and submit that for review and approval and any recommendations shall be incorporated into the final design of the project.

Implementation Responsibility: Project developer

Monitoring Responsibility: City of Hayward Building Division

Timing: Prior issuance of a Building Permit for the project

Noise

Noise Mitigation Measure NOI-1: The following measures shall be incorporated into the proposed project to reduce interior noise levels:

- A qualified acoustical consultant shall review the final site plan, building elevations, and floor plans prior to construction and recommend building treatments to reduce interior noise levels to 45 dB(A) Ldn or lower. Treatments would include, but are not limited to, sound-rated windows and doors, sound-rated wall and window constructions, acoustical caulking, protected ventilation openings, etc. The specific determination of what noise insulation treatments are necessary shall be conducted on a unit-by-unit basis during final design of the project. Results of the analysis, including the description of the necessary noise control treatments, shall be submitted to the City, along with the building plans and approved design, prior to issuance of a building permit.

Exhibit B

- Provide a suitable form of forced-air mechanical ventilation, as determined by the local building official, for all residences on the project site, so that windows can be kept closed at the occupant's discretion to control interior noise and achieve the interior noise standards.
- A noise barrier (solid fence) shall be installed along Gading Road for the backyards of Lots 1 and 20 to reduce the exterior noise levels to 60 dB or lower. Details shall be determined during the design phase by a qualified acoustical consultant.

Implementation Responsibility: Project developer

Monitoring Responsibility: City of Hayward Planning and Building Divisions

Timing: Prior issuance of a Building Permit for the project
