THE PROJECT WILL DRAIN TO A BIO-RETENTION AREA (BR-1). FROM THIS BMP, THE OVERFLOW STORM DRAIN WILL TIE INTO AN EXISTING 42" PIPE IN SAKLAN ROAD, WHICH DISCHARGES INTO THE HAYWARD LANDING CANAL TO THE SOUTH (PARALLEL TO AND SOUTH OF WEST STREET).

THE HAYWARD LANDING CANAL STORM DRAIN SYSTEM IS A CONCRETE LINED CHANNEL OR PIPE TO THE BAY AND THEREFORE THIS PROJECT IS EXEMPT FROM HAVING TO SATISFY THE HYDROMODIFICATION (HM) REQUIREMENTS OF THE COUNTY CLEAN WATER PROGRAM.

AS A RESULT, THE BIO-RETENTION AREA IS DESIGNED FOR TREATMENT ONLY, USING THE 4% METHOD.

STREET TREE PLANTING SPECIFICATIONS

- Tree shall be healthy, disease and insect-free, well rooted, and properly trained with a straight trunk that can stand upright without support. Tree shall exhibit a central leader, or a main branch that can be trained as a central leader. Branches shall be well-developed and shall be evenly and radially distributed around the trunk. Root ball shall not exhibit kinked or circling roots.
- Tree shall comply with federal and state laws requiring inspection for plant diseases and pest infestation. Clearance from the county agricultural commissioner, as required by law, shall be obtained before planting trees delivered from outside the county.
- Prior to planting tree, determine the location of existing or future underground utilities. Locate tree a minimum of 5 feet from lateral service lines and driveways. Locate tree a minimum of 10 feet from a light pole, and a minimum of 30 feet from the face of a traffic signal, or as otherwise specified by the City.
- Tree pit shall be tested for proper drainage prior to planting tree. Fill pit with water; if water remains after a 24-hour period, dig three 4" diameter by 3-foot deep holes at the bottom of the tree pit. Backfill with drain rock.
- Set tree in an upright and plumb position. As much as possible, tree shall be positioned such that dominant branches are parallel to the roadway and are oriented away from potential conflicts.
- If required by the City, a pressure-compensating bubbler, or drip emitters, shall be provided to each tree.
- Depending on the planter strip width, or the tree well size and the tree species being planted, a 24" deep root-barrier may be required by the City to be placed between the root-ball and the curb and/or sidewalk. Length of strip barrier or size of the box barrier will be specified by the City.
- Stakes are to be removed when the tree diameter meets or exceeds the diameter of the stake.
